

WEISSR CONNECTOR — SYNCHRONIZE YOUR CORE BUSINESS STRUCTURE

ONE PLATFORM FOR ALL CORE MASTER DATA

For SAP S/4HANA® environments

Harmonizes SAP master data across systems

Weissr Connector is a powerful integration and synchronization solution designed to harmonize core organizational master data across SAP S/4HANA and connected systems.

Ensures one version of truth for core data objects

It enables your enterprise to maintain a single consistent version of truth for key master data objects — including GL accounts, company codes, plants, cost centers, and profit centers — across business units and geographies.

Reduces alignment effort and inconsistencies across business units

By centralizing master data governance and synchronization, Weissr Connector eliminates inconsistencies, accelerates system alignment, and ensures every department operates on the same trusted information foundation.

How it works

Weissr Connector seamlessly integrates into your SAP landscape, acting as a centralized coordination layer for master data synchronization.

It monitors changes to core master data objects, applies validation and transformation rules, and automatically distributes updated information to connected systems and environments.

With its intuitive Fiori-based interface, data stewards and process owners can manage synchronization activities, review validation results, and track system alignment – directly within SAP and in real time.

Product capabilities

Compatible with SAP S/4HANA® and ECC environments

Designed for SAP environments to ensure secure and smooth communication.

Unified SAP Fiori user experience

A modern, role-based interface with personalized dashboards and real-time synchronization monitoring.

Configurable synchronization rules

Define validation logic, mappings, and transformation rules to ensure consistent updates across all entities.

Automated distribution and updates

Automatically propagates validated master data to target systems, improving accuracy and reducing manual effort.

Scalable multi-entity architecture

Supports complex enterprise structures with multiple company codes, plants, and controlling areas – enabling efficient scaling and global rollouts.

Business outcomes

Consistency and accuracy

Aligned financial and organizational structures across systems improve transparency, reduce reconciliation work, and support more reliable reporting and analytics.

Efficiency and automation

Automated validation, synchronization, and distribution reduce manual maintenance and eliminate repetitive data entry.

Compliance and governance

Built-in business rules and approval workflows help enforce corporate standards and regulatory requirements.

Speed and agility

SAP-compatible connectivity supports faster updates, smoother migrations, and shorter project timelines.

Collaboration and control

Finance, controlling, and IT teams have a shared, governed workspace for managing master data — improving visibility, accountability, and decision-making.

Reliable data at the heart of your business

When key structures such as GL accounts, company codes, plants, and cost centers are synchronized and trusted, downstream processes — from reporting and consolidation to planning and analysis — become more predictable and efficient.

With Weissr Connector, your organization gains confidence and control by operating from one accurate source of master data.
